Why ALOSCA Dry legume inoculants?

- ▶ Can be dry sown. Sow legumes early to leave the cereals seeding window clear.
- ▶ Can be used with seed dressings that are typically harmful to inoculants.
- ▶ Convenient application. Can be blended with fertilisers, seeds or in a third box for ease of application.
- ▶ No need to mess around with slurries, simply blend during the typical transfers of seed or fertiliser from the shed to the paddock.
- ▶ Highly protective inoculant formulation well suited to shallow autumn sown small seeded pasture species which are typically prone to soil surface drying post seeding.
- ▶ Easy to store – no refrigeration required.

FEBRUARY EARLY BIRD OFFER

Buy any ALOSCA Granular Legume Inoculant for Pastures or Cropping and receive not only the cheapest form of nitrogen (the one you grow yourself) but an additional 10% of free product.

Product must be purchased and delivered during February 2012 and be purchased in increments of 250Kg to receive each additional 25Kg bag of a group of your choice.
